

Epic 1: Data Collection

Story: Download the Dataset

The first step in the Credit Card Fraud Detection project is to collect a suitable dataset for training and evaluating the machine learning model.

Dataset Source

The dataset used in this project is the Credit Card Fraud Detection dataset available on Kaggle.

Dataset Link: <https://www.kaggle.com/datasets/mlg-ulb/creditcardfraud>

Dataset Description

The dataset contains real-world credit card transactions made by European cardholders. It consists of a single CSV file named **creditcard.csv**. Each record represents one transaction.

Dataset Features

- Time
- V1 to V28 (PCA-transformed numerical features)
- Amount
- Class (Target Variable)

Target Variable

Class = 0 : Legitimate Transaction

Class = 1 : Fraudulent Transaction

Purpose of the Dataset

The dataset is used to train, validate, and evaluate machine learning models that classify credit card transactions as legitimate or fraudulent.

Conclusion

The Credit Card Fraud Detection dataset was successfully downloaded from Kaggle and prepared for data preprocessing, visualization, model training, and deployment.
