

Credit Card Approval Prediction – Pre-Requisites

This document lists the software, libraries, and system requirements needed to develop and deploy the Credit Card Approval Prediction project.

Software and Tools

- **Anaconda Navigator:** Used to manage Python environments and packages.
Official Website: <https://www.anaconda.com/download>
- **PyCharm:** Python IDE for coding and debugging.
Official Website: <https://www.jetbrains.com/pycharm/>
- **NumPy:** Numerical computing library.
Official Website: <https://numpy.org/doc/stable/>
- **Pandas:** Data manipulation and analysis library.
Official Website: <https://pandas.pydata.org/docs/>
- **Scikit-learn:** Machine learning library for model training.
Official Website: <https://scikit-learn.org/stable/>
- **Matplotlib:** Library for data visualization.
Official Website: <https://matplotlib.org/stable/>
- **Seaborn:** Statistical visualization library.
Official Website: <https://seaborn.pydata.org/>
- **Flask:** Framework for deploying the machine learning model.
Official Website: <https://flask.palletsprojects.com/>

System Requirements

- Python 3.10 or above
- Windows / Linux / macOS
- Minimum 4 GB RAM
- Visual Studio Code or PyCharm
- Git and GitHub Account (recommended)
- Internet Connection

Required Python Packages

`pip install flask pandas numpy scikit-learn matplotlib seaborn joblib`

Conclusion

These prerequisites provide the necessary environment for data preprocessing, machine learning model development, evaluation, and deployment using Flask.
